

ARIAD candidate-budget sweep (N=10,000, k=32, sparse top-32 teacher)

Budget scale s multiplies every expansion source: $c_{o2} = 80s$, $c_{i1} = k_{\text{rev}} = 32s$; $O(i)$ ($k = 32$) is always kept, so $C_{\text{scored}} = 32 + 112s$ (measured).
 Final epoch of 500, single seed. Dense final MSE = $6.70e-04$ (off the left panel's scale).
